

Features, QoL, and Known Bugs

Player-facing v2.2 feature and compatibility reference

What v2.2 delivers

Area	v2.2 status
National Dex	1,025/1,025 species obtainable in one save
Functional forms	61 documented regional or item-driven forms
Trades	No real trade or connection required
Save compatibility	Persistent layouts preserved from v2.0, v2.1 and v2.1.1
Frame rate	60 FPS / uncapped-frame-rate hacks remain disabled for hardware stability
Distribution	Code, documentation and xdelta patch only; full ROM remains local

Preserved features and quality of life

Rebalanced trainers and Gym Leaders; Infinite Candy and Pocket Heal; Portable PC on L; buyable Nature Mints and Ability Capsules; type changes; free Heart Scales after seven Gyms; Master Balls after eight Gyms; hard level cap; Mega Evolution; smoother level curve; and the Kanto endgame boss rush.

v2.2 encounter policy

Only seed stages are newly added to the wild when their later stages can be evolved in the same save. Common families are concentrated in Johto, aquatic families in water tables, and legendary, mythical, paradox and similarly high-power species in Kanto or post-game areas at 1% in every period.

Special form and ability policy

Regional and permanent functional forms have explicit sources. Cosmetic forms, fusions, mounts and automatic battle transformations are not separate capture targets. Terastal remains disabled; Terapagos uses its base form and Filter.

Known compatibility notes

This project prioritizes HGSS stability over exact replication of mechanics designed for later engines. Ball Fetch, Commander, Dancer, Mimicry and Tera Shift use the stable substitutions listed in Ability Changes. Manual save-fixture and long-session hardware testing remain recommended even after automated and build verification.
